## Simplex 1

P. Stallinga

MIEET 4° ano

A simplex communication channel is one in which the communication is in one direction. A good example is radio and television. There is no information going from listener and viewer to the source.

Find out and describe as good as you can (in view of our lectures on Telecom Network Systems) how the following simplex communication technology works:

### **DCF77**

DCF77 is a signal originating from Mainflingen (Germany) that is used to synchronize clocks:
